

Sections

The sections are NJF's professional bodies, with responsibility for their respective areas.

NJF consists of the following sections:

- **Soil, Water and Environment**
- **Crop Science**
- **Horticulture and Landscape**
- **Plant Protection**
- **Animal Science**
- **Engineering**
- **Agricultural Economics**
- **Education and Extension**

A section board can support and promote specific working groups, for instance to:

- Arrange seminars, scientific courses, etc.
- Establish and develop co-operation in special fields within the scope of the section
- Clarify questions regarding research methodology, terminology, etc.
- Compare available research results
- Prepare plans for research assignments which can be solved more appropriately through Nordic co-operation

Networking for sustainability

- in agriculture and horticulture

- in biology and biotechnology

- in agricultural and rural economy

About NJF

The Nordic Association of Agricultural Scientists (NJF), established in 1918, is a non-profit association of about 2000 members of national NJF associations in Denmark, Finland, Iceland, Norway and Sweden. A number of Baltic agricultural scientists are also members of NJF.

Our members are engaged in research, education, extension, research administration or other public or private services in the agricultural sector.

NJF's most important objective is to promote agricultural research in the Nordic-Baltic countries. Networking is the keyword. NJF arranges seminars, which facilitate close contacts between scientists, advisors and end-users of knowledge. Our vision is an efficient and sustainable utilization of our agricultural and horticultural resources.

By being a member of NJF, you are entitled to attend our seminars, workshops and other activities at reduced price, but above all, you can make valuable contacts with other scientists in your field.

The working language of NJF is English. Direct e-mails and the web are used extensively for information exchange (www.njf.nu).

NJF's activities are financed through grants, membership fees and income from seminars.
